

ADB Workshop on Policy Architecture for High Integrity Carbon Markets under the Paris Agreement

10-11 December 2024 | Aloft Singapore Novena | In person by Invitation

Objectives

Carbon markets are increasingly being recognized as a pivotal mechanism to channel financial resources into initiatives combating climate change. As integral components of the climate policy architecture, these markets play a crucial role in reducing GHG emissions cost-effectively, mobilizing all important carbon finance in the case of international carbon markets and generating revenue in the case of domestic markets, and promoting the adoption of low-carbon technologies and solutions.

The Asia and the Pacific region is witnessing growing carbon market activity, driven by ambitious climate goals and the need for cost-effective emissions reductions. The value and size of the carbon markets are expected to steadily increase with Article 6 Rules finalized at COP29, countries updating their nationally determined contributions (NDCs 3.0) and the private sector starting to implement their net-zero commitments. Countries in Asia and the Pacific can take advantage of these opportunities by aligning their national strategies and establishing the necessary policy, legal and regulatory frameworks required to operationalize carbon markets domestically and internationally.

This workshop brings together policymakers from ADB developing member countries (ADB DMCs), market standards experts, project developers, and other key stakeholders to share insights and explore strategies for implementing carbon markets under Article 6 of the Paris Agreement and within the voluntary carbon market (VCM) framework. Ultimately, this workshop aims to assist ADB DMCs in designing a holistic national policy architecture for high-integrity carbon markets by:

- (i) providing an overview of Article 6 of the Paris Agreement and its implications for international cooperation post-COP29;
- (ii) developing tailored carbon market strategies aligned with each ADB DMC's specific context and climate goals, including how they might leverage international cooperation under Article 6 of the Paris Agreement and the VCM; and
- (iii) introducing ADB's key knowledge resources such as the *National Strategies for Carbon Markets under the Paris Agreement: Making Informed Policy Decisions* (published in 2023) and *VCM Legal Principles Handbook (to be published in Q1 2025)*.
